ONLINE CLOSING SESSION · WEDNESDAY 4 NOVEMBER 2026

Modern OSH Governance and Inspection in the Energy Sector

Closing the loop · strategic foresight · action planning

10:00–12:00 Turin time · 11:00–13:00 Kyiv time
International Training Centre of the ILO

A capacity-building activity under the ILO project “Protecting and Preparing Ukraine's Energy Workforce for Sustainable Recovery”, supported by the Government of the Kingdom of the Netherlands.

ITC International Training Centre

OUR TWO HOURS TOGETHER

What we will do this morning

Two movements: one that looks forward twenty-five years, one that turns last week into next week.

01

Strategic foresight for OSH to 2050

Modern OSH governance and inspection in a transforming energy sector.
ILO, OSHE

02

Looking back: what we built

The journey from 20 October to 30 October, what the week produced, and the view from the project.
ITCILO · ILO Office for Ukraine

03

Your course dashboard

A bilingual record of the course that stays available after it ends.

04

Action planning and next steps

What you take home, the final eCampus activities and your certification.

The week did not end on Friday

The residential phase was never meant to be the whole programme. Three things could only be done at a distance of a week.

01 Observation needed time to settle

You saw three very different operations in three days. What transfers and what does not is a judgement that improves once you are back at your own desk, looking at your own installations.

02 Foresight belongs at the end, not the beginning

A conversation about 2050 is only useful once we share a vocabulary and a set of concrete cases. We now have both.

03 Commitments made in public are kept

Each of you named something you intend to change. Saying it again today, to the same people, is what turns an intention into a plan.

01

Strategic foresight for OSH to 2050

Modern OSH governance and inspection in a transforming energy sector · ILO, OSHE

SPEAKER

Francisco Santos-O'Connor

International Labour Organization · Occupational Safety and Health Branch (OSHE)

[Placeholder — insert short biography, areas of work and recent publications before the session.]

Francisco opened our learning journey on 20 October with international OSH principles, rights and standards, and OSH management systems. He closes it today by taking the same framework forward to 2050.

INSERT PRESENTATION

Strategic Foresight for OSH to 2050

Francisco Santos-O'Connor · ILO OSHE

Insert the speaker's own slides here.
This editable placeholder may be deleted once they are added.

Approximately 45 minutes, followed by discussion.

DISCUSSION

Three questions back to the room

Fifteen minutes. Please answer from where you actually sit — a ministry, an inspectorate, a grid operator, a mine rescue unit.

01

Which driver is already in your building?

Not the one that sounds most dramatic — the one you could point to this week.

02

Which one would change your job most?

If it arrived in five years, what would stop working in the way you currently prevent, inspect or manage?

03

What could you start preparing now?

One decision, one document or one competence that does not require anyone's permission.

ITC International Training Centre

02

Looking back: what we built together

20 October – 30 October 2026 · one online session, five days in Turin, three study visits

Four movements, not one week

The residential phase sits in the middle of a longer arc. Today is the fourth movement, and it is not the last thing that happens.

20 OCT — 1

Online opening

Sectoral dynamics, international OSH standards, the Ukrainian picture, and pre-departure preparation.

26–27 OCT — 2

Technical workshops

OSH systems, emergency repair protocols, PPE, AI and digital tools, labour inspection — and the lab that built our observation charter.

28–30 OCT — 3

Learning from practice

IREN, Sogin and Imerys Talc Italy — three operations, three lenses, three structured debriefs.

4 NOV — 4

Online closing

Strategic foresight, consolidation, action planning — and the dashboard that outlasts all of it.

The expertise was already there

Twenty-two participants from the ministries, the inspection authorities, the grid and the mines — plus the ILO and ITCILO team.

22

participants

from twenty-one institutions in fourteen cities

2 ministries

Ministry of Energy and Ministry of Economy and Environment

2 inspectorates

State Labour Service and the State Inspectorate for Energy Supervision

11 energy companies

the transmission operator and ten regional distribution companies

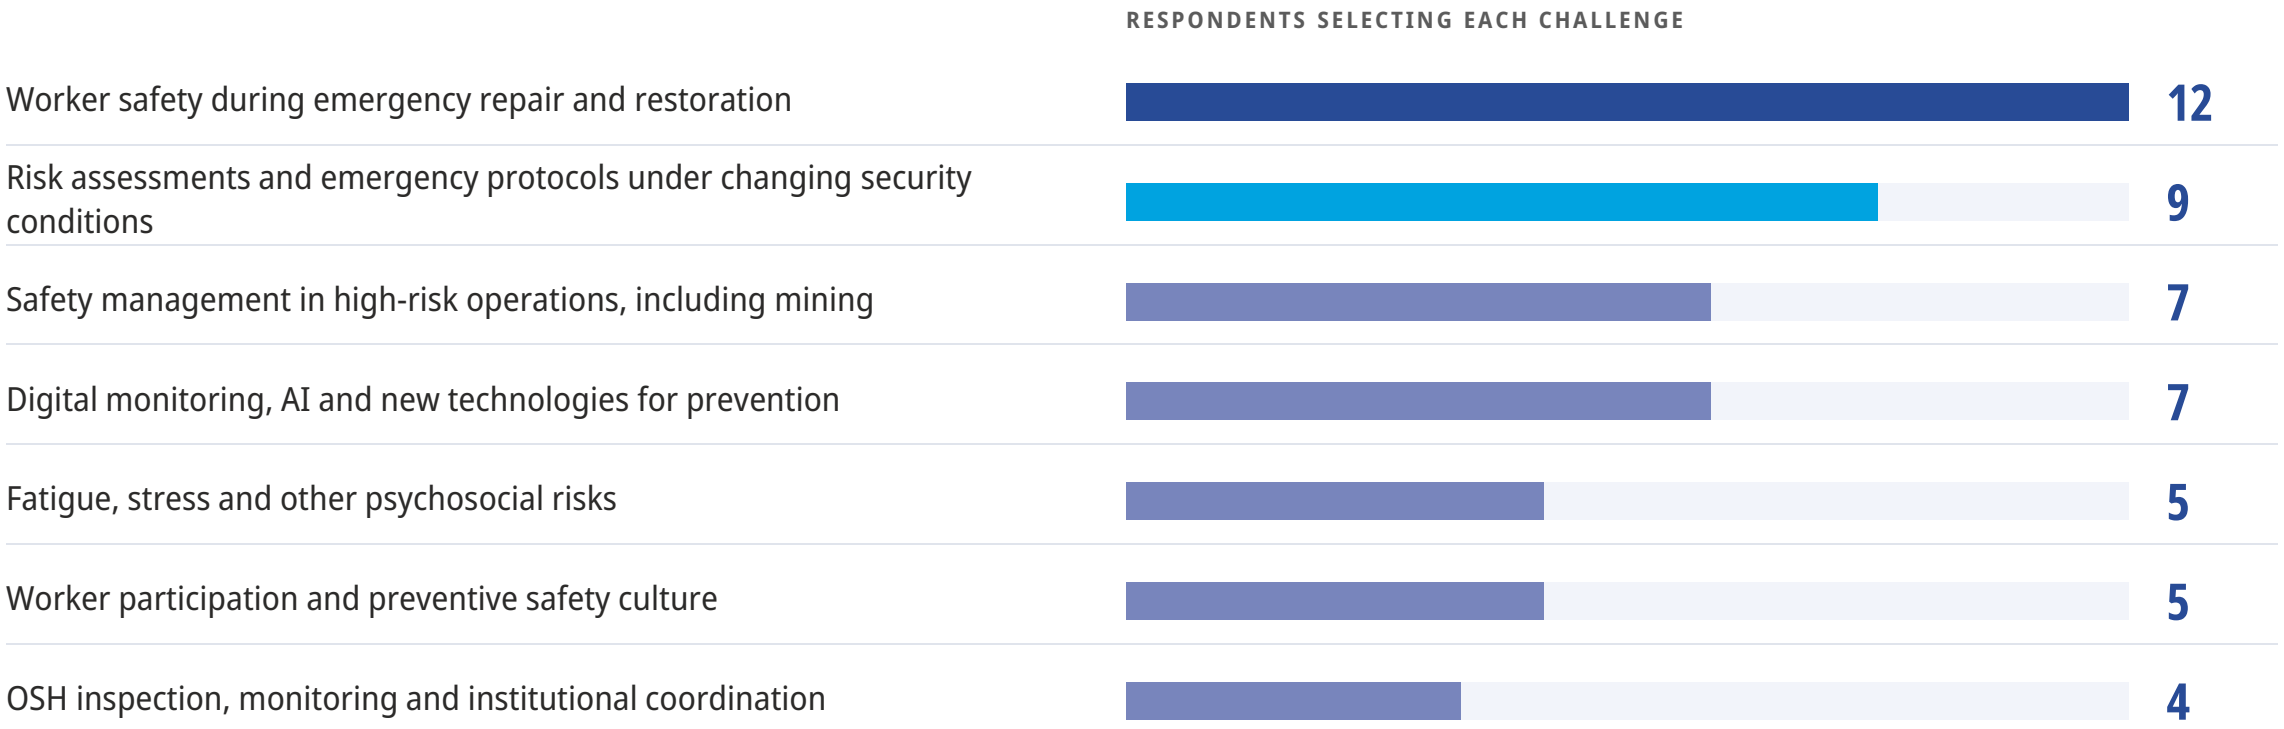

3 mining and rescue

a state coal enterprise and two mine rescue units

Eleven of the nineteen survey respondents had fifteen years or more of professional experience. Thirteen had never taken part in an international OSH training or study visit before.

The challenges you prioritised

Issues respondents say are most relevant to their institution at present.

Emergency repair safety leads the priorities — and only three of you work on technology.

19 respondents · select up to 3 challenges · values are counts (multiple responses allowed)

What you named on the first morning

One challenge and one expectation each. They stayed on the wall all week and sorted themselves into four questions.

A

Emergency work and critical controls

What must remain reliable under pressure?

B

OSH governance and cooperation

Where are responsibilities or processes difficult?

C

People, organization and well-being

What needs to change in how work is supported?

D

Technologies and practical transfer

Which tools could be useful — and feasible?

"Risk assessment should be seen not as a formal requirement, but as an important tool for preventing injuries and incidents."

Anonymous participant reflection · translated from Ukrainian

How the week answered them

We did not try to answer thirty questions one by one. We built one instrument and used it three times.

01 A shared observation lens

Four questions carried into every session and every site. How is a risk recognised early? Who can make the safe decision? What keeps prevention working? What would adaptation require?

02 The Protocol-to-Practice Lab

Tuesday afternoon. Four mixed tables took three draft wartime OSH protocols apart, asked what in each was genuinely inspectable, and wrote the observation questions we then carried into the field.

03 Debrief that separates evidence from interpretation

After each visit, the same discipline: first what we saw, then what we think it means, then what would have to be true for it to work in Ukraine. That order matters.

LEARNING FROM PRACTICE

Three operations, three lenses

Deliberately not interchangeable. The comparison is useful precisely because the risk contexts are different.

WED 28

IREN

Energy utility OSH practice.
How prevention becomes part of everyday operations — maintenance, emergency protocols, reporting, worker engagement.

THU 29

Sogin S.p.A.

High-risk operations.
Critical controls, permits and procedures in an environment where the consequence of failure is not negotiable.

FRI 30

Imerys Talc Italy

Underground work and mining.
Ventilation, ground control, escape and rescue arrangements, and the safety culture that sustains them.

The same four questions at all three sites. The answers differed; the question of what makes a control hold did not.

Four things that outlive the week

Not impressions. Artefacts — things that exist on paper or on screen and can be used on Monday.

01

A common observation charter

Built by four tables on Tuesday, used at three sites on Wednesday, Thursday and Friday. It is reusable: take it to your own contractor's site next month and it still works.

02

Table records and field notes

Each table named one system or procedure to strengthen, and a first step. Each of you has an individual field-note record from the visits. Those are your raw material for the action plan.

03

Three protocols that were actually stress-tested

The draft wartime OSH protocols went into the lab as text and came out with their weak provisions identified — the ones nobody could verify on a site visit.

04

A network that now exists

Ten distribution companies, the transmission operator, two ministries, two inspectorates and two rescue units now have each other's measure. That is not a soft outcome; it is infrastructure.

ILO OFFICE FOR UKRAINE

Tetyana Minenko

National Project Manager · International Labour Organization

[Placeholder — add the points Tetyana wishes to make before the session.]

Tetyana opened the learning journey on 20 October and again on the first morning in Turin. She closes it here with the view from the project: what the ILO Office for Ukraine does next with what this group has produced.

The view from the project

03

Your course dashboard

Everything we have just described, in English and Ukrainian, in one place that stays open

ONE PAGE, TWO LANGUAGES, THREE TABS

What is on the dashboard

One switch in the top corner changes everything — the agenda, the charts and the reading list.

01

Overview

The course as it was designed and as it was run: the learning journey, how the week was co-created, the observation lens, the three study visits, the full session-by-session programme and the resource persons.

02

Participants

The roster, searchable and filterable, with demographics that update as you filter; the full pre-course survey; and your own self-introductions in Ukrainian with an English translation. No contact details are published.

03

Insights and future foresight

The thirty needs from the wall of cards and the survey. Open any one and you see the sessions that answered it — and the standards, guides and ILO, UN and EU publications to read next.

OPEN IT AT **olena-vazhynska.github.io/Modern-Energy-Sector_Ukraine**

From your challenge to your reading list

This is the part that was built specifically for what happens after today.

01 Find the need that is yours

Thirty needs, grouped into the four question clusters, each one with a number showing how many times it was raised and a tag showing where it came from — the cards, the survey or your introductions.

02 See where the programme answered it

Open it and you get the specific sessions and study visits that addressed it. Click one and the dashboard jumps to that session in the agenda and highlights it.

03 Take the reading list with you

Below that, the further reading: first what the course presentations actually cited, then ILO, UN and EU publications added where the course went only part of the way. Fifty-nine resources in all, searchable.

04 And look at the horizon

Seven foresight drivers sit at the bottom of the tab — the decentralised grid, AI at the worksite, the psychosocial legacy, contractor chains, EU accession, climate, and who the workforce will be. Today's first session belongs here.

ITC International Training Centre

04

From Turin to your institution

Action planning, the final eCampus activities and your certification

ACTION PLANNING · 20 MINUTES

From Turin to Monday morning

Three questions. Please answer in the chat, or take the floor.

One commitment each

Small enough to be true. Something you can begin within thirty days without anyone's authorisation.

01 What will you change?

One procedure, one checklist, one briefing, one clause. Name the document.

02 Who else has to agree?

If the answer is nobody, start on Monday. If it is somebody, name them — that is your first meeting.

03 How will you know it worked?

One observable sign, thirty or ninety days out. Not a feeling — something a colleague could verify.

Share what you are comfortable sharing. Nothing said here will be attributed to a named individual in any published material.

Four things still waiting for you

All four are in the “Final activities” section at the bottom of the course page. Two of them are required for your certificate.

REQUIRED

Post-course knowledge assessment

Ten multiple-choice questions, one attempt. It mirrors the assessment you took before the course, so you — and we — can see what moved. Please complete it before you log off today if you have not already.

REQUIRED

Satisfaction questionnaire

Short, anonymous in reporting, and genuinely read. This is a first edition of this programme; your criticism is more useful to us than your praise.

OPTIONAL

Digital credentials

Two versions are available, English and Ukrainian. Claim the one you need — or both — and you will receive a verifiable badge and certificate you can share.

OPTIONAL

Photo gallery

The week in pictures, including the group photograph from Trino. Please add your own — the gallery is better when it is not only ours.

CERTIFICATION

Your certificate and digital credentials

Issued by the International Training Centre of the ILO. Two conditions, one of which you have already met.

01 Attendance of at least 80 per cent of sessions

Counted across the online opening, the five residential days and today. For almost everyone in this group, this condition is already satisfied.

02 Completion of the mandatory activities

The post-course knowledge assessment and the satisfaction questionnaire. These are the only two outstanding items, and both take a few minutes.

03 What you receive

An ITCILO Certificate of Participation and a digital credential — a verifiable badge with a permanent link, which you can attach to a professional profile or an institutional record.

If anything does not appear in your eCampus account within a week, write to spgt@itcilo.org and we will resolve it.

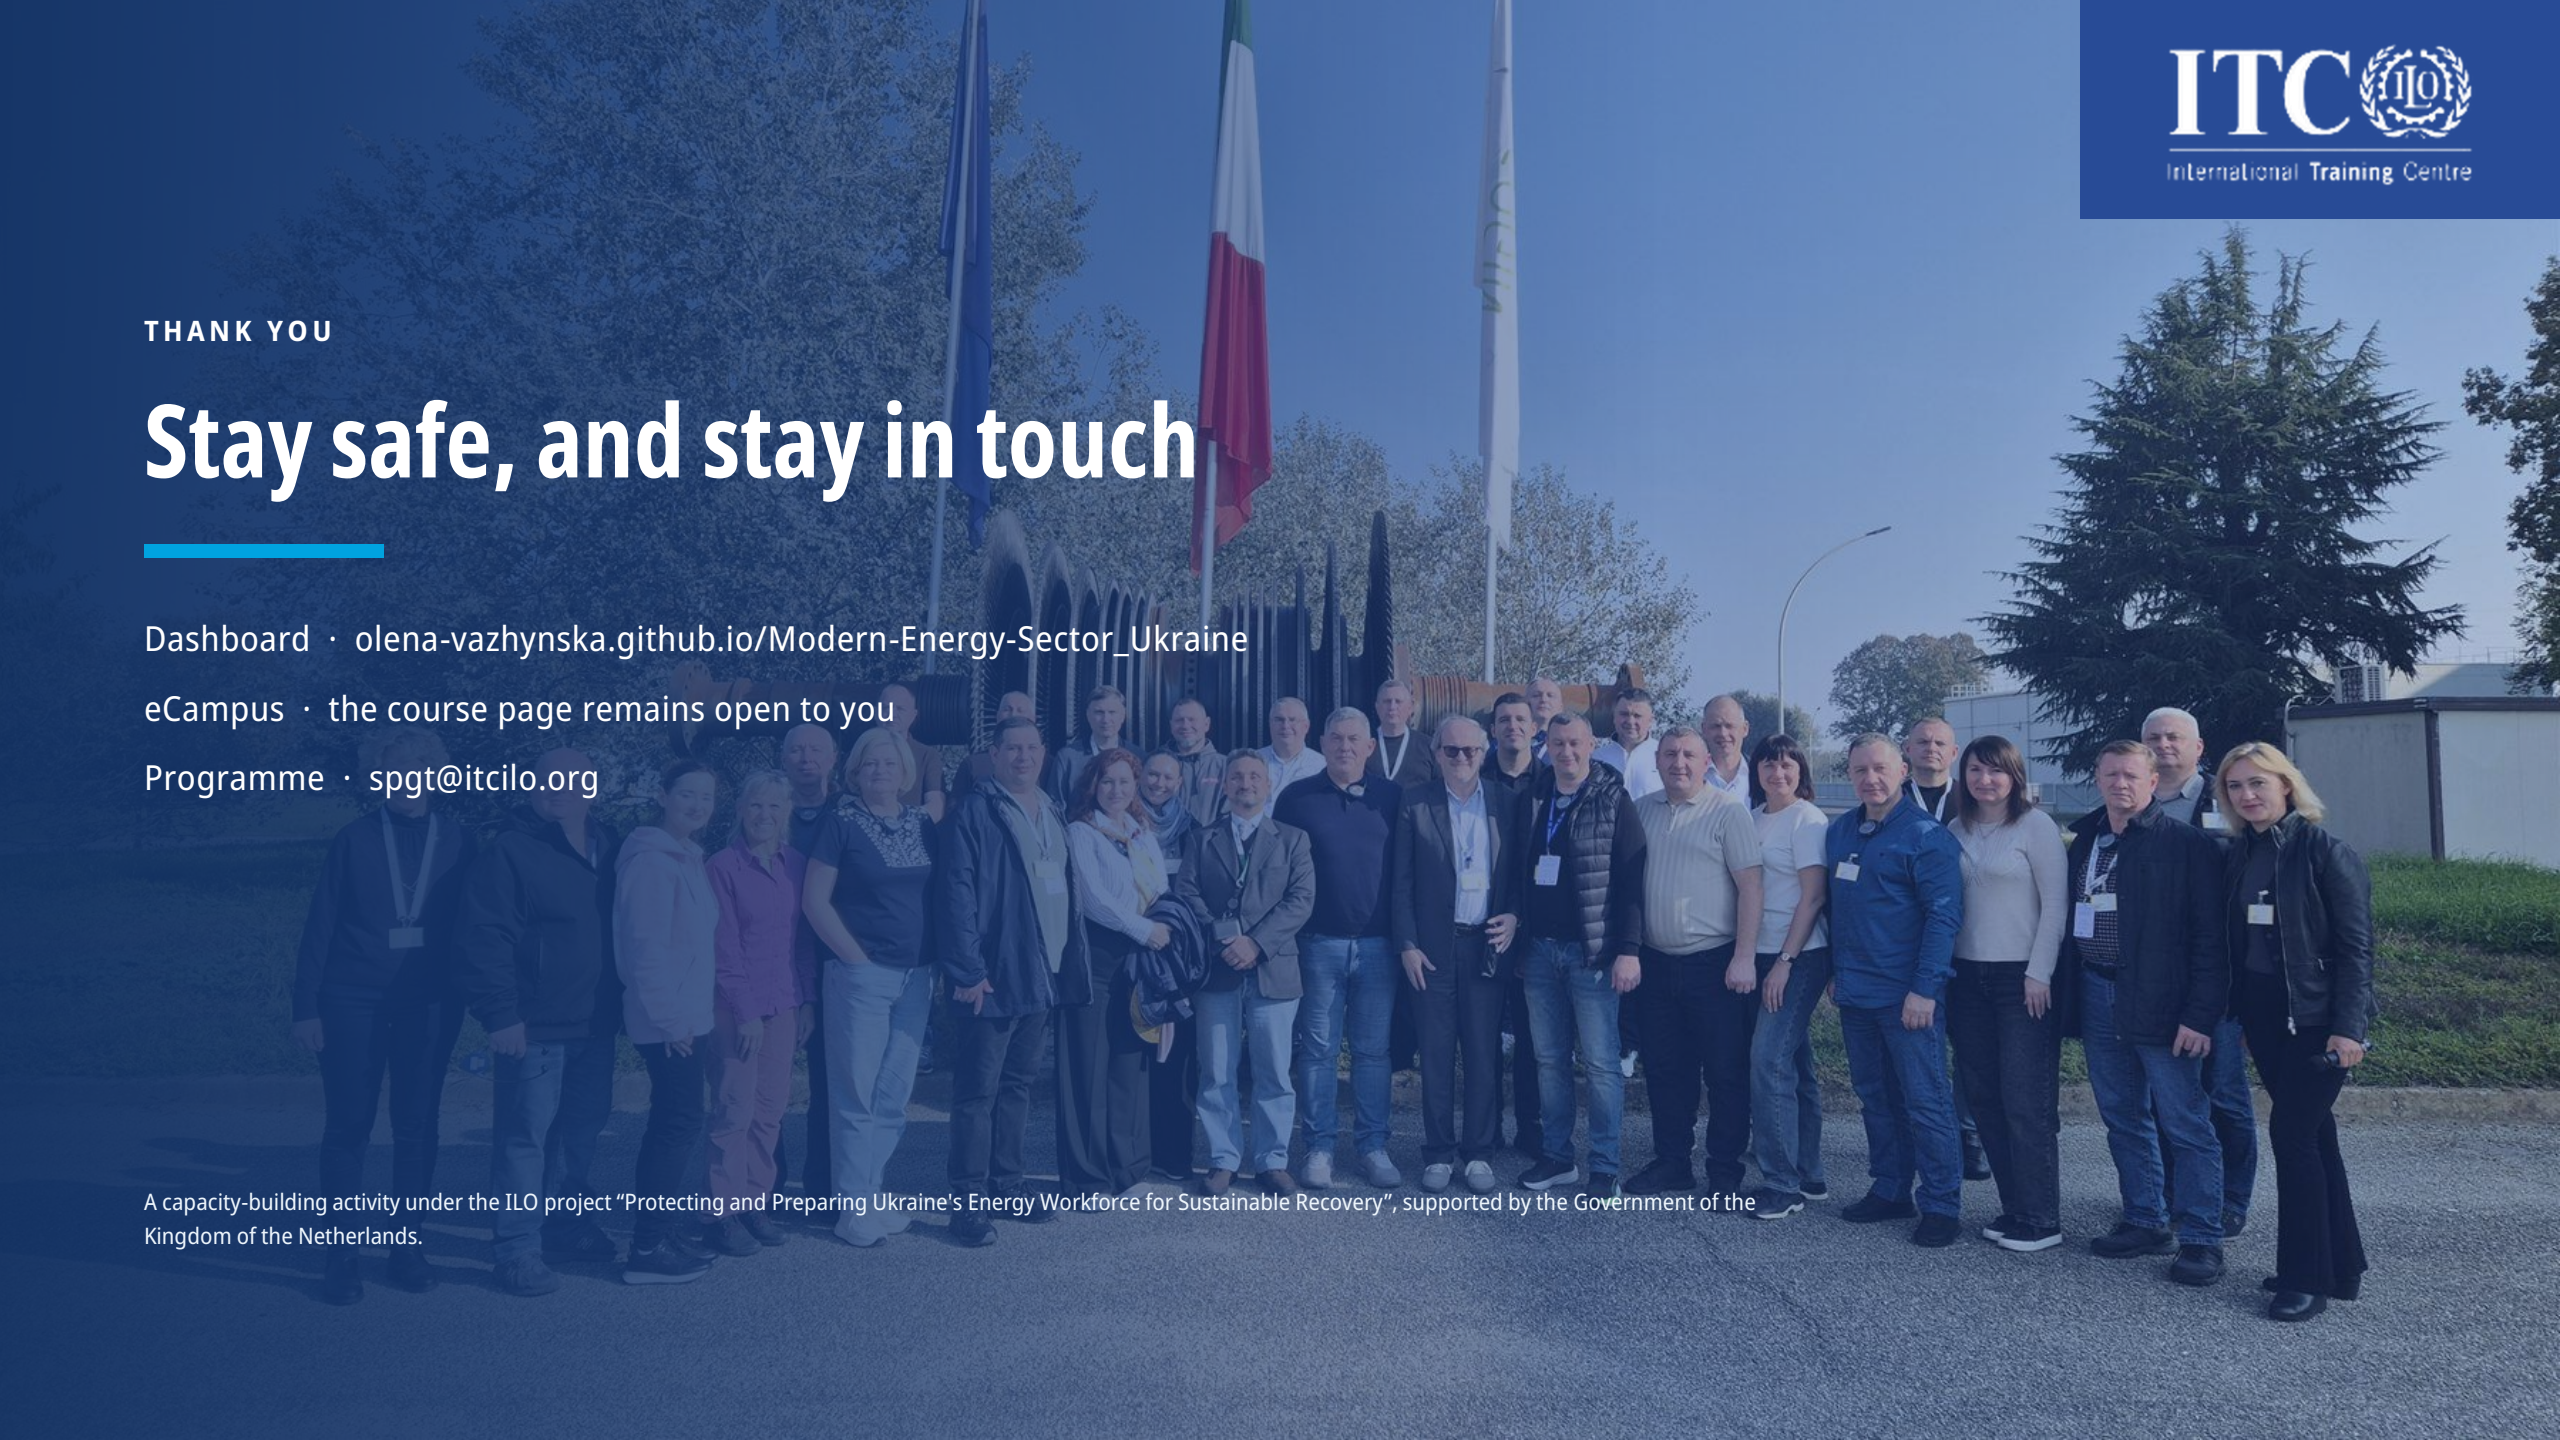

THANK YOU

Stay safe, and stay in touch
